DETAILED ACTION

1. This application has incorrectly numbered claims. The original claims present in the Application were numbered from 1-9. Therefore the newly added claims have been renumbered under Rule 126, as claims 10-24.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 10, 15 and 20 are drawn to a method of screening for compounds and peptides capable of modifying the activity of a potassium channel protein, classified in class 435, subclass 7.1.
 - II. Claims 11-14, 16-19 and 21-24 are drawn to a pharmaceutical composition which comprises as an active ingredient a compound or a peptide which is capable of significantly modifying the activity of potassium channel protein expressed in the brain, classified in class 514, subclass 12.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the protein can be prepared by materially different process, such as by chemical synthesis, or obtained from nature using various isolation and purification protocols.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

2. The claims of Groups I and II are drawn to multiple nucleotide sequences (SEQ ID NO: 1, 5, 6th to 3257th nucleotide of SEQ ID NO: 1 or 4th to 3057th nucleotide of SEQ ID NO: 5 and nucleotide encoding polypeptide of SEQ ID NO: 2). Each of the different nucleic acid sequences are independent and distinct because no common structural or functional properties are shared. Accordingly, these sequences are each subject to restriction under 35 U.S.C. § 121. Regardless of the Group elected, Applicant is additionally required to elect a single nucleic acid sequence, which if determined to be patentable, would also be patentably distinct from the other nucleic acid sequences. This requirement is made under 1192 O.G.68 Notice (November 19, 1996), as examination of more than one sequence in one application would result in an undue burden on the PTO. This is not an election of species requirement.

3. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement to be traversed (37 CFR 1.143).
